

MedStock Daily Work Plan

23 September 2026 | Objective: prepare and label all stock, complete the core stock workflow, and verify data integrity end to end.

7

Tracked work items

74

Active product SKUs

429

Barcodes to prepare

Executive Summary

Today’s work focuses on preparing barcode labels for the full physical stock, completing the operational stock pages, and validating that Google Sheets, inventory records, dashboard figures, and transaction logs remain consistent throughout the workflow.

Barcode Scope

Stock Group	Source	Active SKUs	Barcodes
AES	Thonglor stock dated 230926	62	262
PEN	Pharmacy Stock dated 230926	12	167
Total		74	429

Ticket Overview

Ticket	Work Item	Status	Expected Output
RQ-448	Import Stock Page	In Progress	Complete barcode validation, inventory posting, duplicate prevention, and log creation.
RQ-445	Edit Dashboard	In Progress	Confirm live Google Sheets data, inventory totals, stock movement, and recent activity.
RQ-449	Check Stock Page	In Progress	Verify barcode lookup, physical count comparison, location, lot, and stock status.
RQ-451	Cut Stock Page	In Progress	Validate stock deduction, open-container handling, negative-stock protection, and logging.
RQ-388	End-to-End Stock Flow Testing	To Do	Test the full barcode-to-dashboard workflow and record defects with reproducible steps.
RQ-446	Design DataLog	To Do	Define a searchable audit view for every inventory action and quantity change.
RQ-452	Setup Laptop Ready to Work	To Do	Prepare the development environment, Google Sheets connection, Git workflow, and local app.

Operational Workstream

Barcode preparation and physical stock labelling

1

Prepare the Workstation — RQ-452

- Confirm the working Git branch and local repository status.
- Install dependencies, validate environment variables, and start the local application.
- Verify connectivity to Google Sheets and the Apps Script service.

Deliverable: A stable development and testing environment with live data access.

2

Validate the Barcode Requirement List

- Read AES stock for Thonglor and PEN stock for Pharmacy Stock, both dated 230926.
- Match every product to the current Product Catalog and exclude deleted SKUs.
- Separate sealed stock from open containers and confirm the remaining quantity of each open container.

Deliverable: A verified list covering 62 AES SKUs, 12 PEN SKUs, and 429 required barcodes.

3

Generate and Register Barcodes

- Generate labels by SKU using stock date 230926 and the correct branch or stock group.
- Use one barcode per sealed unit and one barcode per open container.
- Confirm that every generated barcode is recorded in BC Registry and that sequences are unique.

Deliverable: A complete barcode set registered in MedStock before printing.

4

Print and Quality-Check Labels

- Print labels in SKU groups and reconcile the printed quantity with the work sheet.
- Scan at least one label per SKU to verify readability and encoded data.
- Use Reprint only for damaged, missing, or unreadable labels.

Deliverable: A complete and verified set of readable barcode labels.

5

Attach Barcodes to Physical Stock

- Match the label to the product name, strength, SKU, branch, and stock condition.
- Attach one label per sealed item or open container without covering lot or expiry details.
- Reconcile labelled stock, unused labels, and the barcode work sheet.

Deliverable: All physical stock labelled and ready for system import.

6

Import Stock — RQ-448

- Scan each attached barcode and confirm that it exists in BC Registry.
- Post the item to the correct location and lot while preventing duplicate imports.
- Confirm that Inventory and Log Data are updated for every successful import.

Deliverable: All labelled stock represented accurately in Inventory.

Application and Validation Workstream

Complete the stock workflow and confirm reporting accuracy

7

Check Stock Page — RQ-449

- Validate barcode lookup, SKU, product, branch, lot, and stock status.
- Compare the system count with the physical count and identify missing, excess, or misplaced items.
- Record the stock-check activity in Log Data.

Deliverable: A confirmed match between physical stock and system inventory.

8

Cut Stock Page — RQ-451

- Test quantity deduction for sealed units and open containers.
- Prevent deductions beyond the available balance and update zero-stock status correctly.
- Confirm that each cut or sale is recorded with the before, change, and after quantities.

Deliverable: Reliable stock deductions with a complete audit trail.

9

Dashboard Update — RQ-445

- Verify inventory totals, barcode counts, stock additions, stock cuts, and recent activity.
- Confirm that all data comes from Google Sheets and refreshes correctly.
- Ensure deleted SKUs no longer appear and renamed products display correctly.

Deliverable: A dashboard that reflects the latest operational data.

10

Data Log Design — RQ-446

- Define transaction ID, timestamp, action, barcode, SKU, product, branch, lot, and user fields.
- Show quantity before, quantity changed, and quantity after each transaction.
- Support search and filtering by barcode, SKU, product, action, branch, and date.

Deliverable: A clear and searchable audit history for all stock activity.

11

End-to-End Stock Flow Test — RQ-388

- Run the full flow: catalog check, barcode generation, registry, print, label, import, check, cut, dashboard, and log review.
- Test duplicate import, unknown barcode, wrong branch, excessive deduction, zero stock, open-container quantity, and connection failure.
- Record defects with severity, evidence, and repeatable steps.

Deliverable: A verified workflow and a prioritised defect list for follow-up.

Completion Checklist

☐ Development workstation is ready and connected.	☐ AES and PEN barcode lists are verified.
☐ 429 barcodes are generated, registered, printed, checked, and attached.	☐ Stock is imported and physical counts match Inventory.
☐ Check Stock and Cut Stock flows pass validation.	☐ Dashboard and Data Log show consistent live data.
☐ End-to-end testing is complete and defects are documented.	☐ Changes are pushed to the dev branch and CI checks pass.
